INGRAM CLOUD
More as a Service

How to Exceed Application Goals

Application modernization is critical to successful digital transformation. As a service provider this is an opportunity you can't afford to miss.

The application modernization opportunity is set to reach **$65B by 2025** at a CAGR of 27%[1].

93% of IT leaders find the process of application modernization challenging due to staffing, tools and training issues[2].

How the Ingram Micro Cloud growth solution can help

Through our Application Modernization growth solution, we can help you meet the complex challenges your customers are facing today.

Keep track of disparate apps
Enable your customers to consolidate all web applications by leveraging Azure Web Apps.

Increase developer innovation
Help your customers increase developer productivity with multi-language support.

Gain visibility into performance
Give your customers detailed application performance including resource usage and response times.

Accelerate deployments
Accelerate customers' ad-hoc deployments with the ability to easily switch across testing, staging, and production.

Streamline migration
Migrate existing customer apps to containers to ease application deployment and management.

Secure legacy apps
Offer customers container-level security and monitoring for their Kubernetes cluster.

Helping partners seize the opportunity

Take advantage of **upsell opportunities**

Establish **long-term partnerships**

Expand your expertise to outpace competitors

On average, our partners grow their businesses:

3x faster
Net new customer adds

5x faster
Seats added

8x faster
Revenue generated

Fast-track your application modernization capabilities with Ingram Micro Cloud
